

M4 Experimental question map

Task 6: Which representation predicts best on the canonical split?

Task 7: Are the differences statistically supported?

Task 8: Does spatial vessel morphology add information?

Task 8B: Does that survive a 10,000-replicate closure?

Task 9: Can learned joint fusion beat concatenation?

Task 10: Can biomarkers help by conditioning the vessel branch?

Task 11: How well does this transfer to an unseen source?

Task 12: Can class-conditional domain invariance fix the transfer?

Task 13: Does vessel complementarity survive a different RGB backbone?
